

iCohere Collaborative Communities

The One Platform for All Your Web Initiatives

As interest in creating online communities grows, so does the need to develop channels for communication and collaboration that transcend physical, cultural and institutional boundaries. As communities emerge, the need for collaborative learning, information management and knowledge sharing becomes crucial.

iCohere is dedicated to bringing people and ideas together – the visionaries and the visions – through transformative online communities.

Blending the best of emerging technologies with our backgrounds in education, group dynamics, and knowledge management, **iCohere's** web-based collaboration environment has been recognized by early adopters as the most comprehensive and flexible platform available for actualizing communities of practice.

Offering a palette of powerful, yet easy-to-use tools, **iCohere** helps educational institutions, corporations and non-profit organizations design and build collaborative online environments that:

- ▶ Streamline communications
- ▶ Organize and provide access to important information and resources
- ▶ Encourage participation and cooperation
- ▶ Fit each organization's unique needs
- ▶ Deliver real results

The key to **iCohere's** success is that it promotes community by supporting communication, contribution, and collaboration – bringing people and ideas together in a secure, intuitive and integrated environment.

Organizational Collaboration

Building an engaging community requires more than technology alone. It's a collaborative process that necessitates an artful mix of direction and facilitation. That's why we designed **iCohere** to support multiple groups and multiple roles to mirror real-world dynamics, to assign responsibilities, and to stimulate interaction.

iCohere not only offers all the standard features of community software – announcements, online discussions, instant messaging, document management, and searchable member profiles – it also provides advanced tools like group process discussion templates, integration with multimedia presentations and, uniquely, the ability to create databases for capturing qualitative and quantitative data.

Multi-Day Online Conferences

iCohere's multi-day conferences are not only informative but exhilarating! Unlike typical web conferences or webinars that focus on limited communication from an expert to the audience, **iCohere's** online conference platform promotes networking and attendee-to-expert and peer-to-peer relationship-building opportunities that transform occasional meetings into persistent learning communities. **iCohere's** blend of real time (synchronous) and any-time (asynchronous) conference presentations provides a 'round-the-clock' forum for online learning and collaborative interactions.

About iCohere

Founded by a former Dean at John F. Kennedy University and the former manager of Hewlett-Packard's internal strategy and organizational development consulting group, **iCohere** addresses the success factors involved in engaging groups of people in productive online communication and collaboration. Clients range from small to large organizations and include ASAE & The Center for Association Leadership, USAID, NIH, AT&T, and UC Berkeley among others.
